

Airport Enhancement Services Version 2.06

### **What is new in Version 2.06:**

The last weeks I was very busy with other project, which comes in there final state, like Innsbruck and Amsterdam X, there was several update to do for AESlite at some GAP2 Airports for FSX, an update for the runway lights in Mallorca X. So I had not much time left to get all the preparation done, which are needed to get new features around the aircraft and some Airports of this pack was complex too.

But, one small new feature is implemented now, but at the moment only used in EGSS, other airports will be changed in the next version step by step:

#### Gatepositions without Bustransfer:

At some airports (like EGCC, EHSS, EHAM, ELLX and ESSA now), you can find some positions near to the terminal building, where the passengers can walk into the building, so no Bus is needed. AES was always sending a Bus, when there was no jetway at the gate.

No, this gates will have no bus while de-/boarding, only the sounds will play.

#### De-Iceing

I have now changed the liquid for the deicing to the form of the old AES <2.0 Versions, so it looks a little bit better now, until I find a better way for both FS Versions.

And we will have several new airports in this pack, I got now EBBR and ESSA working also in FSX, the new releases of EHAM, PHNL and LEMH are now included and some other nice destinations.

Have fun,

*Oliver Pabst*
